The development of this design guide on underfloor air distribution (UFAD) is the result of a cooperat ive research agreement between the American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc. (ASHRAE), and th e Center for the Built Environment (CBE) at the University of California, Berkeley, for ASHRAE Research Project RP-1064.

Underfloor Air Distribution (UFAD) Design Guide

The use of underfloor air distribution systems (UFAD) is increasing as a solution to space conditioning concerns. As the use of these systems increases, so does the importance of initial design and effective operation and maintenance of these systems after installation. This set includes both UFAD Guide and The O&M Guide for complete guidance.

Design for flexibility to adapt to changing programming and energy needs. The engineering and architecture team exceeded goals through integrated solutions that included underfloor air distribution, high-efficiency air-cooled chillers, controls tailored to occupant use in concert with the building envelope, passive solar control and 100% LED lighting.

Library Design Delivers Flexibility, Energy Savings

The control of room-air stratification is critical to the design and operation of successful underfloor-air-distribution (UFAD) systems, representing an oftentimes complex balancing act: Increasing stratification by reducing airflow or mixing for a given space heat load saves energy, while decreasing stratification by boosting airflow or mixing for a given space heat load improves occupant comfort.

Return Air Design for Underfloor Air Distribution Overhead systems typically utilize duct pressures of .25 to 2 inches water column ("wc). Those systems are seldom concerned with return air pressure drop. If overhead systems have a return air pressure restriction, the room might become pressurized, but comfort will mostly be maintained.

Underfloor Air Distribution (UFAD): The Complete Guide ...

Stratified air distribution systems come mainly in two flavors - traditional displacement ventilation (TDV) systems and the under floor air distribution (UFAD) systems. This presentation will cover the basics of stratified air distribution systems and discuss various design and operational parameters that affect their performance.

Underfloor air distribution (UFAD) is an air distribution strategy for providing ventilation and space conditioning in buildings as part of the design of a HVAC system.

Underfloor air distribution - Wikipedia

It happens all the time. In any commercial environment with an open-plan office space, some people just need more cool air and others in the same space bundle up with winter wear, or battle for temperature control. Besides taking care of this age-old struggle, the underfloor air distribution method of HVAC (heating, ventilation, air conditioning) design, within the larger MEP (mechanical ...
